## Fruit Trees

Small Fruits, Evergreens Shrubs, Vines

Hardy Varieties for New England
D. WEBSTER DOW, Proprietor

The Dow Nurseries are located in North Epping, N. H., three iniles north of Epping Village and R. R. Station, on motor road to Durham and Dover. Visitors are cordially invited to inspect our Nurseries.

## IMPORTANT.

We have at the nursery varieties which are not listed in this catalog, and larger specimens of various kinds. If you cannot visit the nursery and make your own selection send us your want-list, for quotations.

We can give you better selection of stock and better service if you will favor us with your order before the shipping season commences.

NON GUARANTEE-While we aim to have our trees and plants true to label, and hold ourselves prepared to replace, on proper proof, all that may prove untrue, we do not give any warranty expressed or implied, and in case of any error on our part, it is mutually agreed between the purchaser and ourselves that we shall not, at any time, be held responsible for a greater amount than the original price for the stock.

## TERMS:

## Cash with order or on delivery. Prices Net.

ALL PRICES herein named are for Stock at the Nursery or Delivered at the Railroad Station. Boxing and Packing will be charged at actual cost.

When within trucking distance we will deliver at cost, upon special arrangement, thus insuring prompt and safe delivery, and eliminating packing and express charges.

## PARCEL POST SHIPIMENTS.

If stock is ordered shipped by Parcel Post ten per cent must be added to catalog prices to cover postage and special packing.

Claims for any cause must be made upon receipt of goods.

All Perfect-Flowering Varieties and known to be very satisfactory.

Howard 17. (Per.) No new variety in recent years has received publicity and met with approval as has Howard 17. It is a medium early berry of exceptionally good size and quality.

Senator Dunlap. Early. Probably the most popular strawberry raised on account of its long season and high quality. Deep rooted and drought resistant. Productive.

First Quality. Mid-season. Very good for market or for home use. Especially recommended for New England.

Abington. Mid-season. Large. Bright red. Productive. Withstands dry weather. Does well on any soil.

## STRAWBERRIES.

(Continued)

## COMMON VARIETIES

Glen Mary. Mid-season. Is a deep rooted and withstands drought better than most varieties. Produces large plants with big, firm berries.

Marshall. Mid-season to late. Will always be popular in home gardens where given good soil and cultivation, on account of excellent quality, size, and appearance.

Heritage. Late. Does best on heavy land. Very productive and of good quality.

In the event that we are sold out of any of these varieties, customers are requested to please state when placing their order whether we may substitute.

Strawberry plants should be set on well prepared ground to avoid weeds and witch-grass. Never plant them on sod-ground on account of white grubs. Set the plants so that the crown, or bud, will be just at the surface of the ground-not below the surface or above. Spread the roots out and firm the soil around each plant. Cultivate faithfully. If not ready to set the plants on arrival, dig a V-shaped trench in shady, moist soil, unpack and open the bunches and distribute the plants in the trench. Then firm the soil against the roots, but do not cover the crown. When setting out be sure to keep the roots moist.

## ASPARAGUS ROOTS.

3 -year roots, $\$ \mathrm{I} .00$ for $25, \$ 3.00$ for 100, $\$ 20.00$ for 1.000 . 2 -year roots, 75 c for $25, \$ 2.00$ for $100, \$ 15.00$ for 1,000 .

Can be shipped by Parcel Post. Add $10 \%$ for postage.
Conover's Colossal. Extra large. Very productive.
Washington. New variety. Especially rust resistant.
Asparagus Roots. Every farm and home garden should have an asparagus bed. It is desirable for home use, and profitable to market. Make trenches 3 to 4 ft . apart and set the crowns 8 in . deep and I 8 in . apart. Cover with 2 in. of soil when planting and fill in as shoots come up.

## NOTICE

The varieties of fruits and small fruits listed in this catalog have been approved by horticulturists at the Experiment Stations of all the New England states. We nffer only varieties which are desirable for planting in New England.

## EVERGREEN TREES.

Evergreen trees excel all others for beautifying new grounds, the effect being immediate and continuous through the year. We have many varieties in different sizes, suitable for lawn specimens, foundation plantings, groups, hedges and windbreaks.

Evergreens from nursery may be transplanted in the spring and during August and September.

Schwaber. Large, vigorous and creamy yellow. 75c per dozen, $\$ 5.00$ per 100.

## GENERAL PLANTING INSTRUCTIONS.

Care of Stock on Arrival. All stock should be planted immediately on arrival. If this is not possible open the box or bundle and "Heel-in" the stock, that is, plant it temporarily, by digging a trench in a shady, cool place and burying the roots carefully. Never allow the roots to be exposed to the sun or wind. If it is very dry and hot, or the roots have become at all dried out, dip them in muddy water.

Preparation of the Ground. Planting should be done on well-cultivated ground. If this is not possible all sods should be shaken out to kill the grass roots. This is preferable to burying the sods under the tree, since this is likely to cut off the water supply from underneath.

Pruning Before Planting. In digging trees, shrubs, etc., it is impossible to retain the entire root-system. On this account the top of the tree should be cut back to restore the natural balance (except with evergreens). Make all cuts just above an outside bud so that an outward growth will be encouraged. Make a clean, slanting cut on the end of all broken or bruised roots, with the cut surface on the under side. Peach trees should have all the branches removed and the top cut back to within two or three feet of the roots, as with apple whips.

Planting. Holes should be sufficiently large to take the roots without cramping or crowding, and deep enough to permit planting about an inch deeper than the tree stood in the nursery. They should not be dug much in advance of planting, as this practice drys out the hole and the soil which is removed. Hold the tree straight and pack the earth firmly on the roots, taking care that no air pockets are left. It is well to put the top soil nearest the root. In order to do this the top-soil and the sub-soil may be thrown in separate piles when the holes are dug. Be sure to protect the roots from sun and wind during the planting process. Unless drought conditions prevail the use of water should not be necessary. If used at all it should be used liberally, pouring at least a gallon in each partly filled hole and filling the hole after the water has soaked in. After packing the soil firmly with the use of one's heel leave the top-soil loose with a dust mulch to prevent drying out.

Cultivation. Moisture is a limiting factor in the growth of trees. Its conservation by cultivation is advisable. When this is not possible a mulch of straw, coarse manure, hay, or the like, should be maintained to shade the soil and keep down the weeds. Weeds and grass rob the tree of moisture and plant food. Cultivation is fertilization and pays good interest.

## DISTANCES FOR PLANTING

Apples, 30-40 feet.
Peaches, 16-20 feet. Pears, 20-25 feet. Plums, $16-20$ feet. Sweet Cherries, 20-25 feet. Sour Cherries, $15-18$ feet. Quinces, $10-12$ feet. Grape Vines, 8-12 feet.

Blackberries, $4 \times 7$ to $6 \times 8$ feet.
